If you are planning equipment or building upgrades that do not fit within the standard incentives, but significantly reduce natural gas consumption, please call 866.450.0005 to learn about custom project opportunities.

General Qualifications

- New or existing commercial or industrial customer of Cascade Natural Gas Corporation on one of the following rate schedules: 504, 505, 511, 570
- High efficiency equipment, i.e. heating, water heating & cooking equipment installed as a replacement, retrofit or new, in place of standard efficiency
- To be considered for incentive funding, the output capacity of heating equipment applied for should generally not
 exceed winter design day requirements by more than 25%. Where multiple parallel units are proposed, heating
 capacities greater than or equal to 100% redundancy will not be incentivized
- Custom incentives are available, contact program representative if the equipment being installed is not on the
 prescriptive incentive list attached
- · Each piece of equipment may only receive one incentive
- Applications must be submitted within 90 days of installation date. Please contact the program if your project does
 not meet this requirement
- Incentives may be subject to change and are only applicable for measures approved within the Biennial Conservation Plan at the time of installation
- Installation must comply with all federal, state and local code requirements
- Call 866-450-0005 or visit www.cngc.com/energy-efficiency/commercial or email conserve@cngc.com to review qualifications and eligibility

Equipment Specific Requirements

- Regular steam trap maintenance and replacement every seven (7) years is required, retrofit only
- · Tankless water heater applications must include the serial number
- For existing packaged HVAC with gas fired furnace and direct expansion cooling sections DCV; controller must meet joint utility advanced rooftop control guidelines
- Incentive eligibility is contingent upon use of natural gas-fired domestic water serving the specific measure equipment
 or fixture
- Insulation projects in spaces with existing, functional insulation do not qualify. Functional insulation is considered any
 existing insulation less than 30 years old. The building/space insulated must be heated with natural gas provided by
 CNGC. Roof insulation is defined as insulation that is installed on top of the roof deck. Minimum value of Post R-19
 applies only where existing walls have an internal insulation cavity. If existing insulation is damaged to the point of
 ineffectiveness or applied in spotty coverage, the insulation must be removed and the condition that led to the
 ineffectiveness/damage must be corrected before the rebate will be considered. Insulation R value must meet
 specifications of current CNGC tariff
